## **Preventive Health Benefits and Coding**

The Preventive Health Benefits and Coding Guidelines (Guidelines) provide additional information related to specific types of preventive services, as defined under the Patient Protection and Affordable Care Act, which may be covered under a Member's Benefit Plan depending on factors such as grandfathered status, product type and anniversary date, and contraception exemptions. The terms and conditions of the written Benefit Plan govern the benefits available to Members, and the Guidelines do not guarantee coverage or payment for a particular service. Members should contact Member Services at the telephone number and address on the back of their Identification Card for further preventive services information.

Preventive care services are for patients without recognized signs or symptoms of the target condition. Screening is the testing for disease in seemingly well individuals so that early detection and treatment can be provided for those who test positive for the disease.

If a screening service results in a diagnosis of a condition, the patient will be followed by a surveillance regimen and recommendations for screening are no longer applicable.

The testing of a person to rule out or confirm a suspected diagnosis because the patient has some sign or symptom is a diagnostic examination, not a screening.

## Providers and members should reference the preauthorization list as some of the below services may require prior authorization to support medical necessity.

Preventive Service	Description	<b>CPT®/HCPCS</b> Code	Diagnosis Code - ICD 10

Sexually Transmitted Disease Testing Chlamydial Infection	Chlamydial infection is the most common sexually transmitted bacterial infection in the United States. In women, genital chlamydial infection may result in urethritis, cervicitis, pelvic inflammatory disease, infertility, ectopic pregnancy and chronic pelvic pain. Chlamydial infection during pregnancy is related to adverse pregnancy outcomes, including miscarriage, premature rupture of membranes, preterm labor, low birth weight and infant mortality.	86631 86632 87110 87270 87320 87490 87491 87810 0353U 0354U	Z00.00 Z00.01 Z00.121 Z00.129 Z11.2 Z11.3 Z11.8 Z11.9 Z20.2 Z72.51 Z72.52 Z72.53 Maternity Diagnoses
Gonorrhea	Women with asymptomatic gonorrhea infection have high morbidity due to pelvic inflammatory disease, ectopic pregnancy and chronic pelvic pain. Pregnant women with gonorrhea infection are at risk for preterm rupture of membranes, preterm labor and chorioamnionitis.	87590 87591 87850	
Syphilis	Screening tests can accurately detect syphilis infection and prescription antibiotics can cure syphilis.	80055 86592 86780

<i>Contraception Counseling</i>	Contraceptive counseling should be between an individual and clinician or appropriately trained professional, emphasizing patient-centered decision making and allowing for discussion of the benefits, risks, and preferences of the full range of contraceptive options. Although less effective as a standalone approach, it is reasonable to provide counseling in fertility awareness-based methods, including the lactation amenorrhea method, for individuals for whom other methods are not acceptable.	99202 99203 99204 99205 99211 99212 99213 99214 99215 99401 99402 99403 99403	G2211 G2212	Z00.00 Z01.419 Z30.011 Z30.012 Z30.013 Z30.014 Z30.015 Z30.016 Z30.017 Z30.018 Z30.019 Z30.02 Z30.09 Z30.2 Z30.40 Z30.41 Z30.42 Z30.430 Z30.431 Z30.432 Z30.433 Z30.433 Z30.44 Z30.45 Z30.46
